HeRAMS Health Resources and Services Availability Monitoring System

HF Health facility

WHO World Health Organization

DISCLAIMER

Disruptions to health systems can impede provision of and access to essential health services. Communities' vulnerability to increased morbidity and mortality substantially increases when a lack of reliable information prevents sound decision-making, especially in rapidly changing environments requiring continued assessment. The Health Resources and Services Availability Monitoring System (HeRAMS) aims to provide decision-makers and health stakeholders at large with vital and up-to-date information on the availability of essential health resources and services, help them identify gaps and determine priorities for intervention.

HeRAMS draws on the wealth of experience and knowledge gathered by the World Health Organization (WHO) and health sector actors, including non-governmental organizations (NGOs), donors, academic institutions and other technical bodies. It builds on a collaborative approach involving health service providers at large and integrating what is methodologically sound and feasible in highly constrained, low-resourced and rapidly changing environments such as humanitarian emergencies. Rapidly deployable and scalable to support emergency response and fragile states, HeRAMS can also be expanded to - or directly implemented as - an essential component of routine health information systems. Its modularity and scalability make it an essential component of emergency preparedness and response, health systems strengthening, universal health coverage and the humanitarian development nexus.

HeRAMS has been deployed in Yemen since 2017 and has allowed for the assessment of 5301 health facilities across the country, against 5536 health facilities targeted.

This analysis was produced based on the data collected up to 4 July 2023 and while the deployment of HeRAMS, including data verification and validation, continue. Hence, this analysis is not final and is produced solely for the purposes of informing operations.

This is the second report of the *HeRAMS Yemen baseline report 2023* series focusing on the availability of general clinical and trauma care services. It is a continuation of the first report on the operational status of the health system¹ and should always be interpreted in conjunction with results presented in the first report. Additional reports are available covering (a) child health and nutrition services², (b) communicable disease services³, (c) maternal and newborn services⁴, and (d) non-communicable disease and mental health services⁵.

Caution must be taken when interpreting the results presented in this report. Differences between information products published by WHO, national public health authorities, and other sources using different inclusion criteria and different data cut-off times are to be expected. While steps are taken to ensure accuracy and reliability, all data are subject to continuous verification and change.

For additional information, please see <https://www.who.int/initiatives/herams> or contact herams@who.int.

This page intentionally left blank to keep the 2 first pages of each indicator on the same double page when printing and when using 2 page view or facing view in a pdf reader

PART I:

OVERVIEW OF THE AVAILABILITY OF GENERAL CLINICAL AND TRAUMA CARE SERVICES

HOW TO READ THE CHARTS

Service availability

The first part of the report provides an overview of availability of general clinical and trauma care services. It should be noted that the analysis was limited to operational health facilities. A summary of health facilities assessed and their operational status is available on page 3. Further details on the operational status of health facilities can be found in the first report of the *HeRAMS Yemen baseline report 2023* series.

Bar chart

Overall availability of the service package is shown disaggregated by governorate and health facility type. The number of health facilities included is displayed below the health facility type name.

It should be noted that the number of services included was limited to health services expected based on national guidelines and depends on the type of health facility. Further details on services included for each type of health facilities is shown in [annex I](#).

Service availability per population (heat map)

A more detailed overview of availability of individual services is shown as heat maps. Each cell indicates the number of health facilities providing a given service in relation to the catchment population. It should be noted that different catchment areas were used for referral and specialized health services (i.e. provincial vs. regional population estimates). For more details on population estimates, see [annex II](#).

To account for partially available services, a weighing was applied with a weight of 1 given to services reported as fully available and 0.5 for partially available services.

Main barriers impeding availability impeding service availability

Bar chart

For services not or only partially available, main barriers impeding service delivery are displayed as percentage of all barriers reported. Alike for service availability, bar charts display main barriers were disaggregated by health facility type and governorate. For each health facility type, the total number of barriers reported across the health service domain is indicated below the health facility type name. Note that for each service, up to three barriers could be reported. Hence, the percentages shown in these charts should not be used to make any conclusion on the percentage of health facilities having reported a barrier. For a conclusion on the frequency of health facilities reporting a given barrier, please refer to the heat map below.

Heat map

Heat maps provide additional insights on main barriers for individual services by catchment area. Cell opacity levels indicate the percentage of health facilities in the catchment area reporting a given barriers. The integer inside the cell denotes the number of health facilities reporting a given barrier while the percentage indicates the percentage of health facilities reporting the barrier. Note that health facilities not reporting a barrier (i.e. health facilities where the service is fully available or not normally provided) were excluded from these charts.

OVERVIEW OF HEALTH FACILITIES ASSESSED

Summary of health facilities assessed

5536 targeted health facilities

5301 health facilities assessed

AVAILABILITY OF SERVICE PACKAGE AND MAIN BARRIERS

Package coverage by health facility type⁶

Package coverage by governorate and health facility type⁶

⁶ Number of services included may vary from one health facility type to another. The "Other" HF type has been excluded as it includes very different and specialized HFs. See [Annex I](#) for a full description of the services included for each health facility type.

Availability of essential services by governorate and health facility type (cont.)

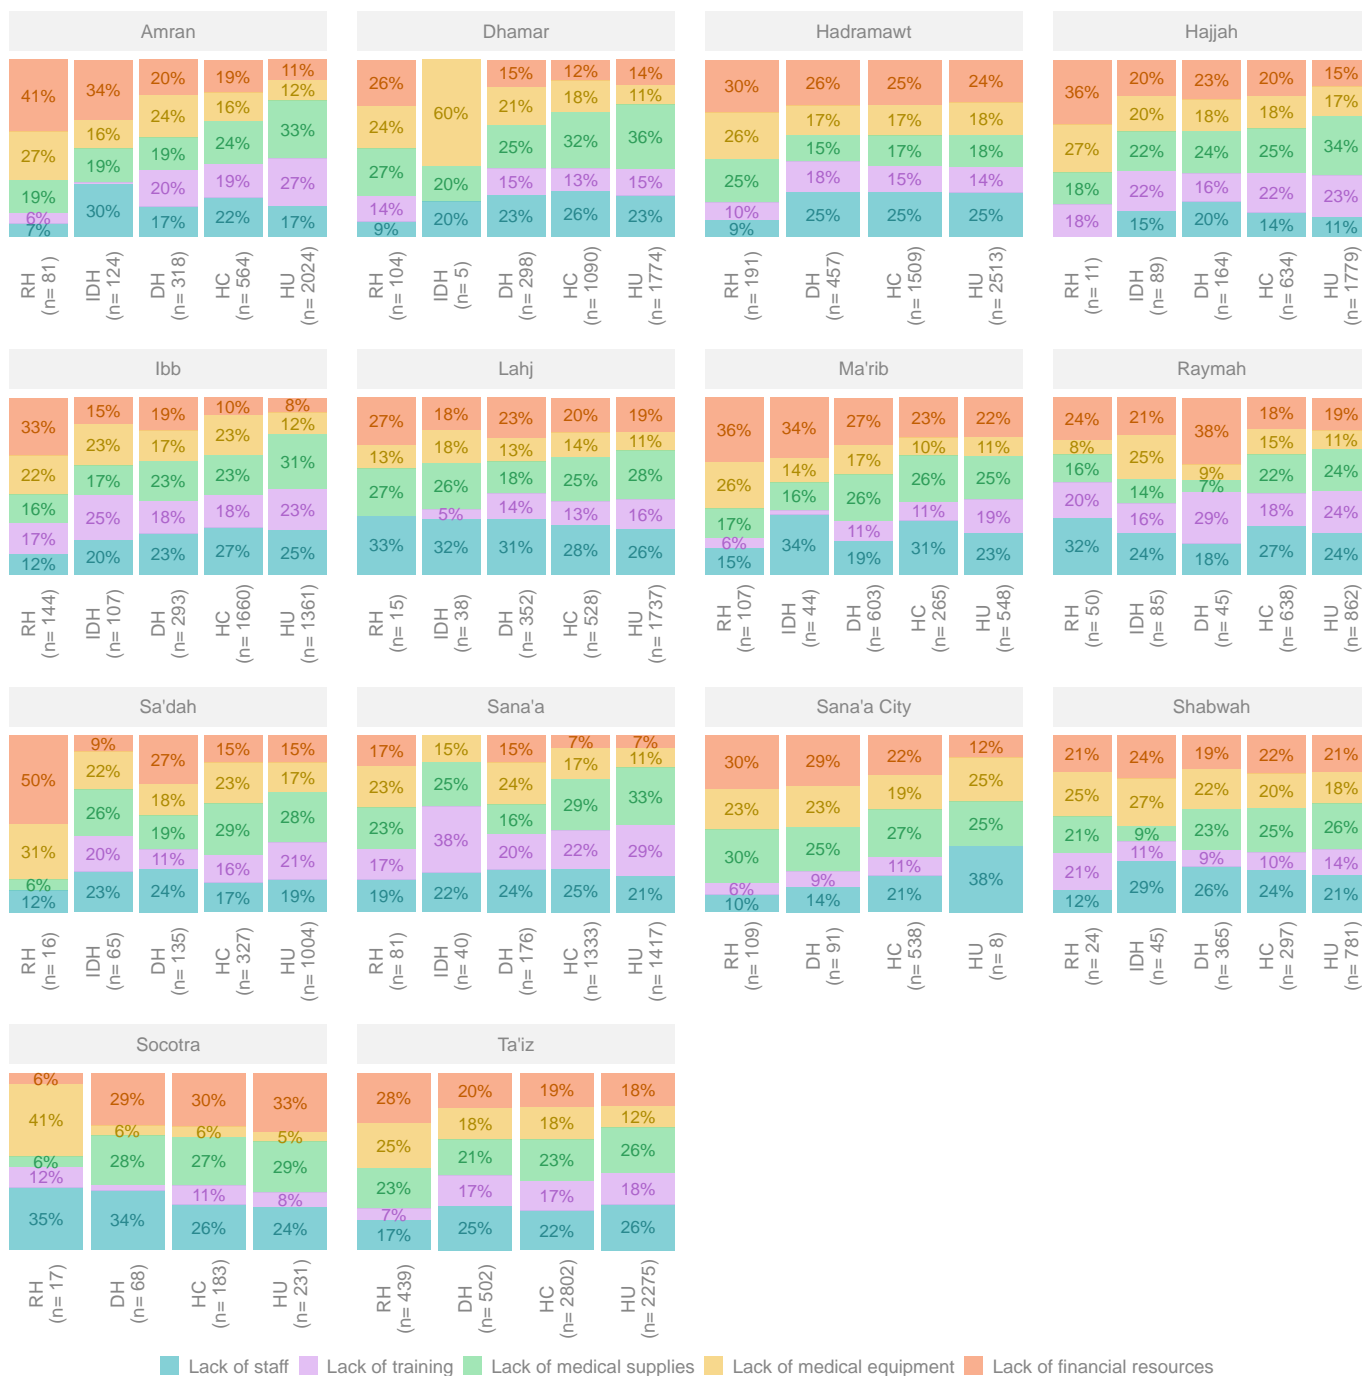

Main barriers impeding availability of essential health services by health facility type

Main barriers impeding availability of essential health services by governorate and health facility type

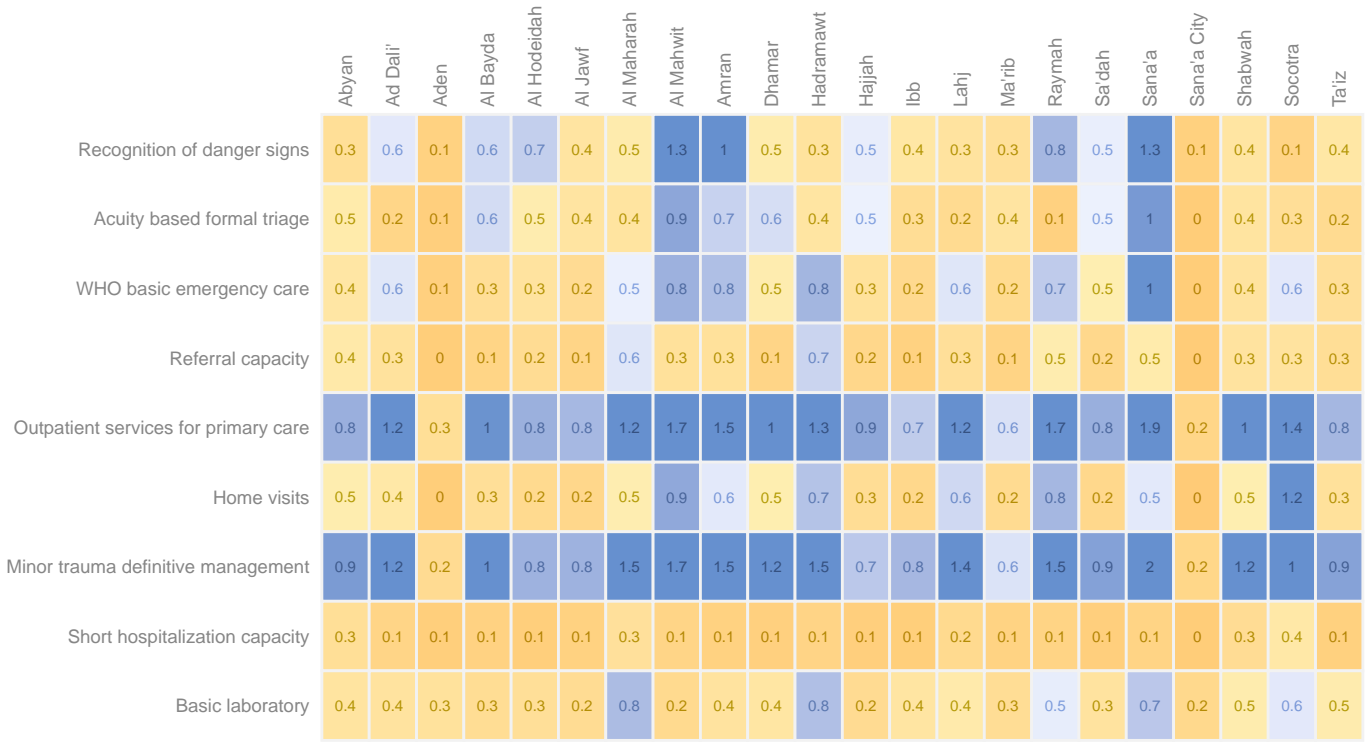

Main barriers impeding availability of essential health services by governorate and health facility type

SERVICE AVAILABILITY BY CATCHMENT POPULATION

Note: While the average number of health facilities providing essential health services per population is a useful metric for high-level comparisons, it is recommended that geospatial accessibility models be developed. By taking into account additional factors such as travel time, these models provide a more accurate reflection of the actual accessibility to and coverage of essential health services.

Number of health facilities providing essential community and primary services per 10,000 population⁷

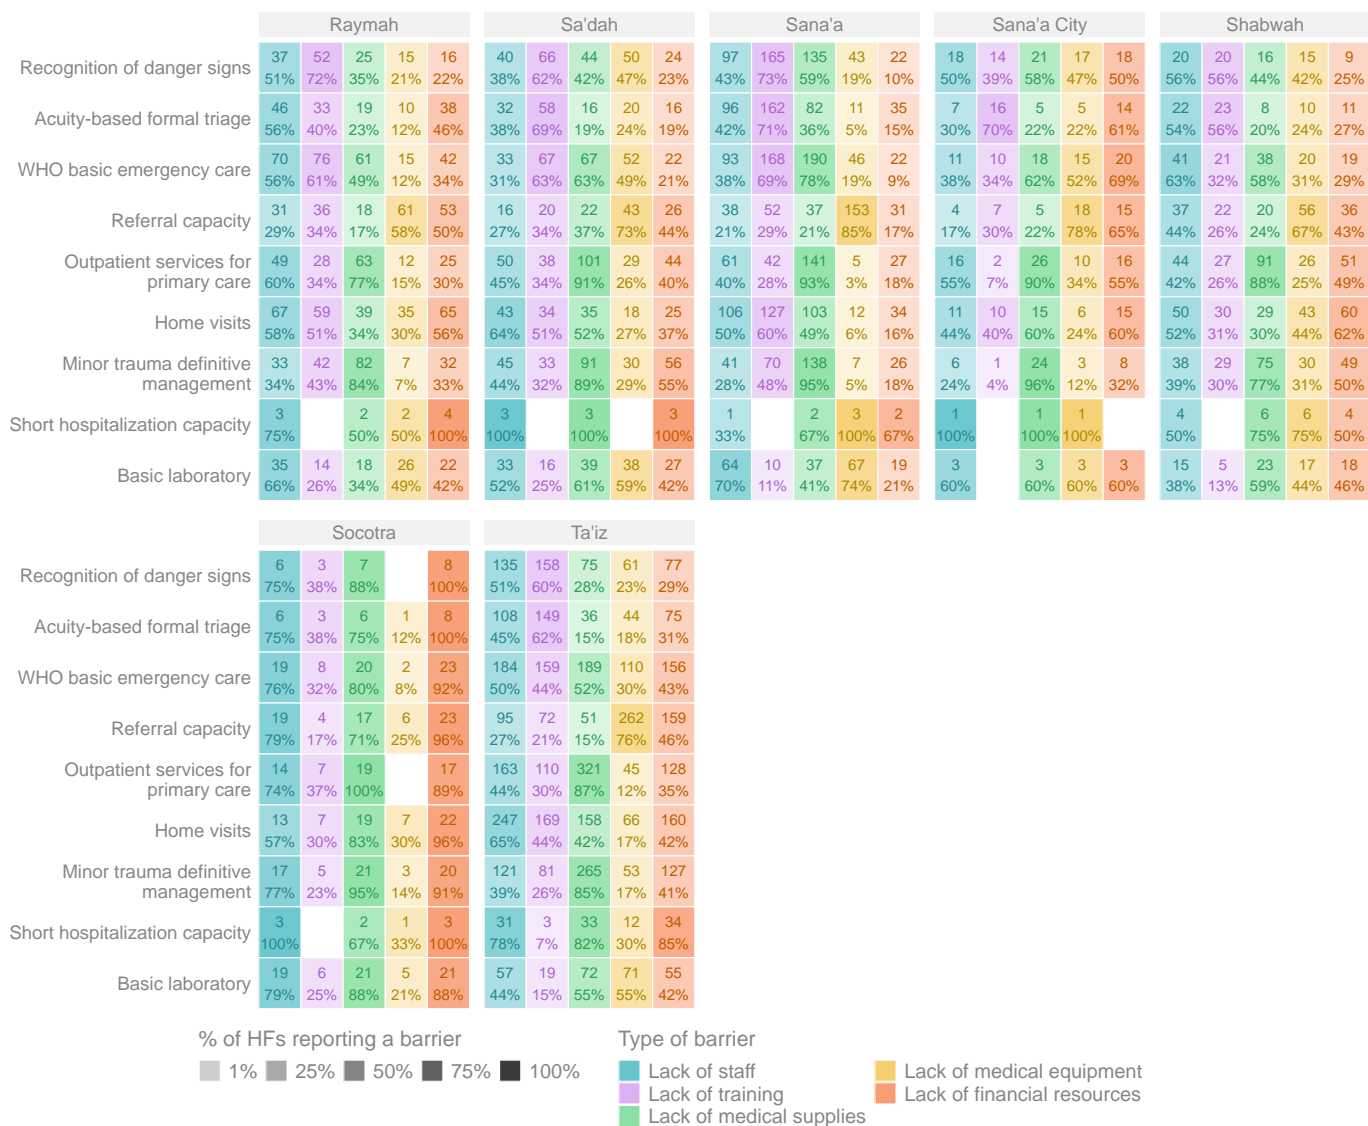

⁷ Sphere minimum standard: 1 HF per 10,000 population. See annex II for population estimates by governorate and by district.

Number of health facilities providing specialized services per 250,000 population⁸

⁸ Sphere minimum standard: 1 hospital per 250,000 population. See annex II for population estimates by governorate and by district.

PART II:

IN-DEPTH ANALYSIS BY HEALTH SERVICE

HOW TO READ THE CHARTS AND THE MAPS

Service availability

Arc charts

Arc charts provide an overview of the overall availability of a health service. The total number of health facilities included in the analysis of a service is shown inside the arc chart. It should be noted that the analysis of individual services was limited to operational health facilities (see page 3 for details). The availability of service is further broken down by governorate and health facility type.

Column charts

Column charts display the availability of a service by governorate. The number of health facilities in a governorate is shown below the governorate's name.

Donut charts

Each donut chart represents a type of health facility. The percentage of health facilities for which the service was available or partially available is shown inside the donut while the total number of health facilities included is shown at the bottom of the chart, below the health facility type name. If a service was not available in any health facility, the number inside the chart displays the percentage of health facilities for which the service was partially or not available.

Maps

Maps display availability of health services at the governorate level. Each circle corresponds to the cumulative number of health facilities in a governorate and may be divided into multiple smaller circles with the colour representing the proportion of health facilities of a specific availability status. To highlight areas not reporting, respectively the impact of non-operational health facilities, maps depict all health facilities targeted with HeRAMS.

Map labels indicate the total number of health facilities expected to provide the service (i.e., excluding non-reporting, not operational, and health facilities where the service is not expected) as well as the percentage of health facilities where service is at least partially available. For ease of readability, labels for governorate where the service is not expected in any or at least partially available in all HSDUs have been omitted.

Barriers

To gain a more comprehensive understanding of the challenges faced by health facilities, whenever a service was not or only partially available, main barriers impeding service availability were recorded.

Donut charts

Each donut chart indicates the percentage of health facilities having reported a given reason. The total number of health facilities reporting at least one barrier is shown below the chart header.

Bar charts

Bar charts depicting barriers follow the same logic as donut charts and exclude health facilities where the service was fully available. The number of health facilities reporting at least one barrier is displayed below the governorates' name.

Important: The denominators of barrier charts exclude health facilities where the service was available up to standard. It should further be noted that health facilities could report up to three barriers for each service. Hence, the sum of all barriers may exceed 100%.

REQUEST FOR AMBULANCE SERVICES BY THE PATIENT

Overall service availability

* HFs with missing value or that reported "Not normally provided" are excluded.

ANNEXES

ANNEX I: DEFINITIONS OF ESSENTIAL SERVICES

SERVICE	DEFINITION	EXPECTED SERVICE				
		RH	IDH	DH	HC	HU
REQUEST FOR AMBULANCE SERVICES BY THE PATIENT	User-request dispatch of basic ambulance services from district-level staging center (e.g., ambulance pool)	X	X	X		
RECOGNITION OF DANGER SIGNS	Recognition of danger signs in neonates, children and adults, including early recognition of signs of serious infection, with timely referral to higher-level care.	X	X	X	X	X
ACUITY-BASED FORMAL TRIAGE	Acuity-based formal triage of children and adults at first entry to the facility (with a validated instrument such WHO/ICRC Interagency Triage Tool)	X	X	X	X	
WHO BASIC EMERGENCY CARE BY PREHOSPITAL PROVIDER	Initial syndrome-based management at scene by prehospital providers for difficulty breathing, shock, altered mental status, and polytrauma.	X	X	X		
WHO BASIC EMERGENCY CARE	Basic syndrome-based management of difficulty breathing, shock, altered mental status, and polytrauma for neonates, children and adults	X	X	X	X	X
ADVANCED SYNDROME-BASED MANAGEMENT	Advanced syndrome-based management of difficulty breathing, shock, altered mental status, and polytrauma in dedicated emergency unit, including for neonates, children and adults (Interventions include intubation, mechanical ventilation, surgical airway, and placement of chest drain, hemorrhage control, defibrillation, administration of IV fluids via peripheral and central venous line with adjustment for age and condition, including malnutrition; administration of essential emergency medications)	X	X	X		
MONITORED REFERRAL	Direct provider monitoring during transport to appropriate healthcare facility and structured handover to facility personnel.	X	X	X		
REFERRAL CAPACITY	Referral procedures, means of communication, access to transportation	X	X	X	X	X
ACCEPTANCE OF REFERRALS	Acceptance of referral with remote decision support for prehospital providers and primary-level facilities, and condition-specific protocol-based referral to higher levels	X	X	X		
ACCEPTANCE OF COMPLEX REFERRALS	Acceptance of complex referrals with remote decision support for pre-hospital providers and lower-level facilities	X	X			
OUTPATIENT SERVICES FOR PRIMARY CARE	Outpatient services for primary care with the availability of all essential drugs for primary care as per national guidelines.	X	X	X	X	X
OUTPATIENT DEPARTMENT FOR SECONDARY CARE	Outpatient department with the availability of all essential drugs for secondary care as per national guidelines (including NCD and pain management), and at least one general practitioner.	X	X	X	X	
HOME VISITS	Include promoting self-care practices, monitoring non-communicable diseases (NCD) medication compliance, and palliative care.	X	X	X	X	X
MINOR TRAUMA DEFINITIVE MANAGEMENT	Pain management, tetanus toxoid, and human antitoxin, minor surgery kits, suture absorbable/silk with needles, disinfectant solutions, bandages, gauzes, cotton wool.	X	X	X	X	X
EMERGENCY AND ELECTIVE SURGERY	Full surgical wound care, advanced fracture management through at least one operating theatre with basic general anesthesia (with or without gas)	X	X	X		
EMERGENCY AND ELECTIVE SURGERY WITH AT LEAST TWO OPERATING THEATRES	Emergency and elective surgery with at least two operating theatres with pediatric and adult gaseous anesthetic	X	X			
ORTHOPEDIC/TRAUMA WARD	Advanced orthopedic and surgical care, including burn patient management	X	X			
SHORT HOSPITALIZATION CAPACITY	Short hospitalization capacity (maximum 48 hours)	X	X	X	X	
20 INPATIENT BED CAPACITY	At least 20 inpatient bed capacity with 24/7 availability of medical doctors (MD), nurses and midwives, and 4-5 beds for short observation before admission, or 24/48-hour hospitalization	X	X	X	X	

SERVICE	DEFINITION	EXPECTED SERVICE				
		RH	IDH	DH	HC	HU
50 INPATIENT BED CAPACITY	Includes pediatric and ob-gyn wards with 24/7 availability of doctors and/or specialists (general surgeon, ob-gyn, pediatrician, others)	X	X	X		
INPATIENT CRITICAL CARE MANAGEMENT	Includes availability of mechanical ventilation, infusion pumps, and third-line emergency drugs	X	X			
INTENSIVE CARE UNIT	Includes at least 4 ICU beds	X	X	X		
BASIC LABORATORY	Basic hematology, bacteriology, and clinical pathology services	X	X	X	X	
LABORATORY SERVICES SECONDARY LEVEL		X	X	X		
LABORATORY SERVICES TERTIARY LEVEL	Includes electrolyte and blood gas concentrations, public health laboratory capacities	X	X	X		
BLOOD BANK SERVICES		X				
HEMODIALYSIS UNIT		X				
BASIC X-RAY SERVICE	X-ray service (basic radiological unit) and ultrasound	X	X	X	X	
RADIOLOGY UNIT	X-ray with stratigraphy, interoperation X-ray intensifier, ultrasound, MRI, and/or CT scan	X	X	X		
MEDICAL EVACUATION PROCEDURES	Medical evacuation procedures (medevac): means of transport and referral network for patients requiring highly specialized care	X	X			
PROCEDURES FOR MASS CASUALTY SCENARIOS	Procedures in place for early discharge of post-surgery patients through referral to secondary hospitals, in mass casualty scenario	X	X			

RH = referral hospital, IDH = inter-district hospital, DH = district hospital, HC = health center, HU = health unit.
